

Integrated Water Resource Management (IWRM) in Sub-Saharan

WIL GLOBAL 2020

05 Nov 2020

What: Project Aim and Objectives

Aim

The scenario where all the stakeholders are actively participating in the IWRM and implementation has been created in the community.

Specific Objectives

- To research about community water issues and potential solutions,
- To enhance connection and engagement in IWRM implementation,
- To empower and build capacity to the community stakeholders involved in the IWRM.

Why: Background

Worldwide

- More than 1.2 billion people lack access to clean water.
- More than 5 million people die every year from contaminated water or water-related diseases.

Sub-Saharan Africa

- 319 million people are without access to improved reliable drinking water sources, 84% of them live in rural areas, where they live principally through subsistence agriculture.
- Exposure to unsafe drinking water, inadequate sanitation and poor hygiene is a leading cause of cholera and a variety of infectious and tropical diseases.

Why: Problem Statement

Lack of community education, stakeholders engagement, institutional capacity and research on IWRM implementation.
